

# MINIMED™ MIO™ INFUSION SET TRAINING

We communicated a few months ago, that due to manufacturing challenges caused by the Covid-19 pandemic, current production capacity at our supplier does not allow us to meet the growing demand for MiniMed™ Mio™ Advance infusion sets. Therefore, we are expecting limited availability until later this year.

As a temporary solution, we have taken the very difficult decision to proactively switch all current MiniMed™ Mio™ Advance infusion set users to MiniMed™ Mio™ infusion sets. This will allow us to serve the maximum number of people while working with the manufacturer to return to normal supply as quickly as possible.

Your healthcare professionals have been notified of the MiniMed™ Mio™ Advance supply limitations, and after assessment your healthcare professional will decide on which infusion set is best for you to transition over to. There are a variety of other Medtronic infusion sets to choose from and a list has been provided to your healthcare professional, your healthcare professional will advise you as to which is the best set for you.

In order to help and support with training on the MiniMed™ Mio™ infusion sets we have been offering online webinar sessions over the last few months. However due to the lack of attendance we now ask that if you require further training or support, please contact our Training & Education Team via email on [rs.educationdiabetesukandroi@medtronic.com](mailto:rs.educationdiabetesukandroi@medtronic.com) to arrange training, please remember to state 'Mio Training Required' in the email subject heading. Additionally, training can be also be arranged via [our Stay Connected Clinics](#)
